**LATEST TRENDS IN PERIO PLASTIC SURGERY
FEATURED ON NEW WEBSITE BY LOCAL PERIODONTIST**

GRAND RAPIDS, MICHIGAN, June 22—Making over the body with plastic surgery is in demand and improving the smile with gum surgery is no exception. More and more people are visiting the periodontist when they are on a quest for self-improvement. New materials, technology and microsurgical procedures have made it possible to correct gum imperfections that would have been impossible to fix even five years ago. A new website, www.ILoveMyMouth.com by local periodontist, David Lamberts, D.D.S., M.S. features dramatic “before” and “after” pictures of actual patients, making it easier to visualize the benefits of these procedures.

Although plastics procedures have experienced recent popularity, Dr. David Lamberts has been specializing in periodontal plastic microsurgery for ten years and has vigorously trained for new procedures as they have emerged. Recently, Lamberts’ expertise was nationally recognized when his work was chosen to represent the crown lengthening procedure by the American Academy of Periodontology (AAP).

“There’s no doubt that periodontal plastic surgery can change lives. Many of the patients I treat say they smile with more confidence, and that makes a difference in how people respond to them,” states Dr. Lamberts. “This surgery can also make patients look younger, sometimes the effect is so profound patients just can’t stop smiling.” Patients considering these procedures can preview what to expect with virtual restorations in Lamberts’ office at Cascade Periodontics before any work is done.

Dr. David Lamberts specializes in periodontal plastic microsurgery and has practiced periodontics for over 20 years, performing over 14,000 surgical procedures. Cascade Periodontics is located at 5510 Cascade Road, SE, Grand Rapids, MI 49546. More information is available about Cascade Periodontics at www.ILoveMyMouth.com, a press room at this site provides easy access to photos and stories.
